

enhance the product appearance and support long-term product performance.

### Surface Attachment

Waste enclosures anchor directly to concrete surfaces or concrete footings with the 3/8" bolts. Anchors and bolts must be specified and provided by the project designer or installation contractor and should be appropriate to the mounting surface. Use the bottom steel ring of the trash receptacle as a template to drill anchor holes or to guide embedded bolt placement. Shim to level if required. (*Tamper-resistant, 1/2-13 x 1-1/2" SS Bolts are available special order from RecycleDesign*).

### Embedded Mount

Waste enclosures can mount on a 3" Diameter steel post with top plate embedded in concrete. 8" SonoTube™ concrete forms are recommended. Local guidelines for footing depths should be followed.

Position and level the post/plate so that it is braced against dislocation by the concrete. Clean any concrete above grade line or finish concrete below grade line to insure a clean installation. Attach enclosure.
